

WHAT IS CLAIMED IS:

1. A computer casing having a front board, a back board, a bottom board, a top board, a left side board and a right side board, comprising:

an internal space formed by the front board, the back board, the bottom  
5 board, the top board, the left side board and the right side board, for mounting a mother board, a CPU, a heat dissipating device and plural electrical elements therein, wherein the heat dissipating device is mounted on the CPU; and

a supporting structure formed on the bottom board corresponding to a location of the CPU and the heat dissipating device, wherein the supporting  
10 structure includes a dent portion to provide a structural strength stronger than any other part of the bottom board.

2. The computer casing according to claim 1, wherein the supporting structure further includes a plurality of pillars protruded at four corners thereof, and a plurality of fixing elements are used to fix the heat dissipating device to the  
15 mother board by passing through the mother board to screw in corresponding pillars.
